

## NX Intensive Training (Crash Training)

The most frequent training!

*Perfect for users who switch their CAD-system!*

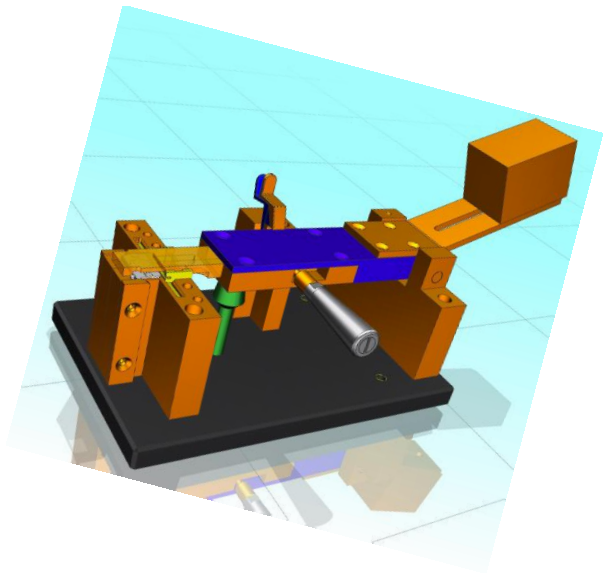

This training is adjusted to the “modern times”... and they are fast.

Most of our customers already know other, parametric 3D-Systems and don't want to “torture” themselves through a two-week training. Nevertheless, there is the whole range of basics: 2D-Shapes, 2D-Sketches, 3D-Bodies and Features. You will be shown how to generate drawings and how to combine assemblies.

After this training, you know what's possible in NX. You'll get the practical experience in your first project in your company.

### Training content

- NX-Layout
- 2D-Curves
- 2D-Sketches
- 3D-Features
- Parametric, Expressions
- Drawing
- Views, Section-Views, Break-Out Sections, Detail Views, Drawing Frames, Title Blocks
- Assemblies
- Mating Conditions between components
- Master-Model-Concept
- **You'll receive our current “NX Crashkurs” book as course document (German and English NX terms).**

### Training prerequisites

Knowledge of another (preferably 3D-) CAD-System is helpful, because the tempo of the training is very high.

### Training duration 5 days (one week)
